

Anthony Rossman

FULLSTACK DEVELOPER

EXPERIENCE

2024 - Current

Freelance Developer | Self-Employed

- Architecting and developing a legal-industry SaaS platform (IntakeFlow), MVP in active use by multiple law firms to automate client qualifications and intake workflows.
- Created an "accessibility-first" Vue component library (ShoeHorn UI) published to npm with 700+ downloads in it's first 2 months.
- Built a full-stack ecommerce platform for a client's Antique & Artifact store.
- Maintain and enhance WordPress websites for legal clients.

2019 - 2025

Legal Assistant | Rossman Law Group, PLLC

- Evaluated prospective cases using structured intake criteria.
- Managed client intake data entry and workflow.
- Coordinated case files and supported attorneys through trial preparation, contributing to record-setting medical malpractice and personal injury verdicts.

TECHNICAL SKILLS

Languages

TypeScript, JavaScript, C#, PHP, SQL.

Frontend:

Vue 3, HTML5, CSS3/SCSS, Bootstrap, GSAP.

Backend:

.NET/ASP.NET Core, Node.js, Entity Framework, REST API design.

Databases:

MySQL, MongoDB.

Cloud & DevOps:

Docker, AWS EC2, Git Bash.

EDUCATION

May 2025

Fullstack Software Development Certificate - Boise CodeWorks

OBJECTIVE

Junior full stack developer with hands-on Vue.js, TypeScript, and .NET experience. Currently piloting an intake automation platform with two law firms and published a Vue component library on npm. Looking to bring the same build-and-ship mindset to a product team and keep learning from experienced developers.

SELECTED APPLICATIONS

IntakeFlow

- A rules-based client intake automation platform for plaintiff law firms (currently specific to personal injury and employment cases).
- Implements configurable case qualification logic to evaluate prospective clients against firm-defined criteria.
- Currently in pilot use by multiple law firms, with real intake workflows and client-feedback driven iteration.
- Built with Vue.js, TypeScript, C#/.NET, and MySQL.

ShoeHorn UI

- A design-agnostic Vue 3 + TypeScript component library focused on accessible-by-default behavior and developer safety.
- Implemented reusable UI primitives (forms, dialogs, combobox, tabs, etc.) with correct semantics, keyboard interaction, and ARIA applied only where appropriate.
- Built dev-time accessibility warnings to prevent common misuse, improving Lighthouse compliance and reducing runtime errors.
- Published as an open-source npm package with 700+ downloads in its first month with continued weekly adoption.

Antique Store Ecommerce Platform

- A fullstack ecommerce application built with Vue.js, TypeScript, .NET, and MySQL.
- Designed layered REST API architecture with DTO-based request/response modeling.
- Implemented JWT-based Authentication (Auth0), role-based access control, and Stripe payment integration.
- Developed admin dashboard with inventory management, order history, pagination, and image upload via Cloudinary.
- Added fuzzy product search using Levenshtein Distance.
